Vertical Bumper Kit Installation

Read this manual and related assembly instructions before attempting to assemble the parts enclosed to ensure that your new CanadaDocks System is assembled safely and correctly.

INCLUDED IN KIT:

VB2

1x

NF38

2x

TR3

2x

TPU1

1x

NL38

2x

Tools Required:

9/16" SOCKET WITH RATCHET TO
SUIT OR 9/16" WRENCH

OR

MARKING TOOL

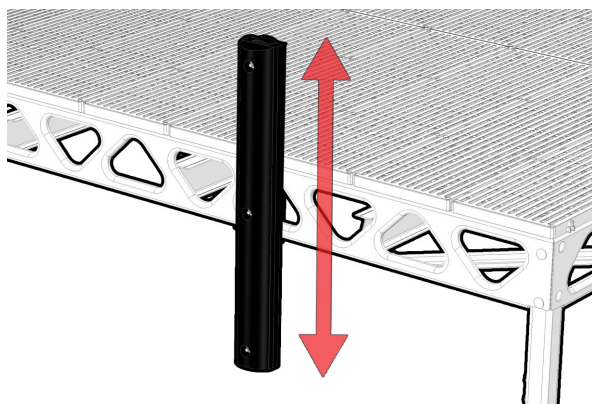

1

VB2

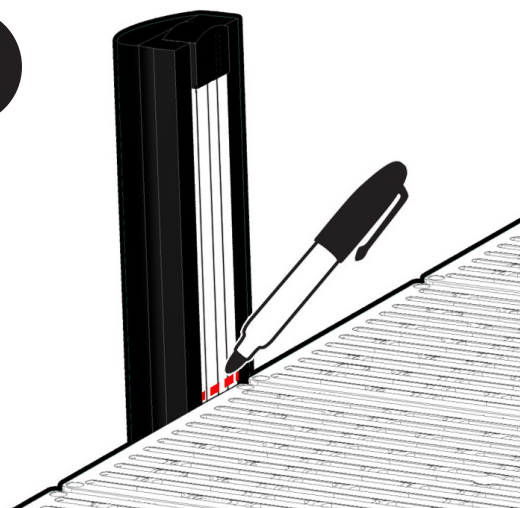

1x

Hold the float to the side of the dock to estimate the height of your bumper.

2

Mark the bumper level with the dock.

3

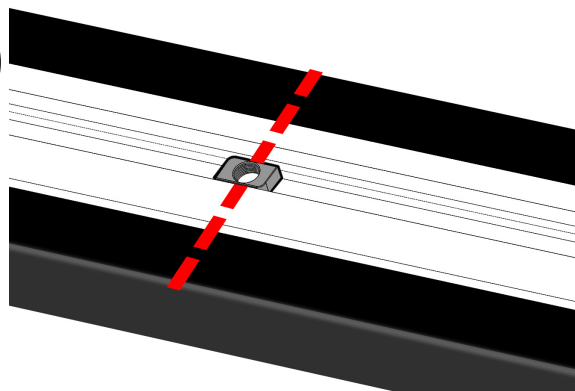

3"

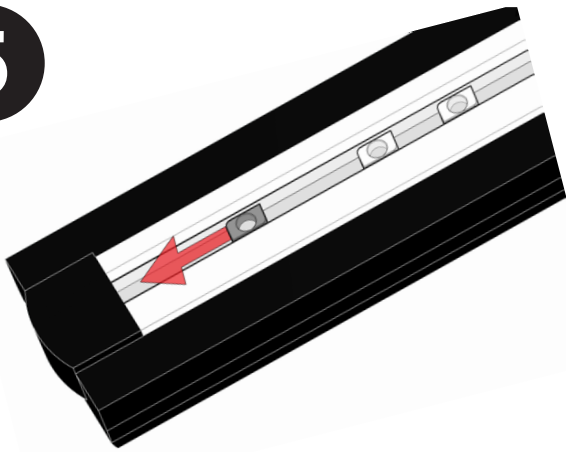

From your original mark, measure 3 inches down and create a new mark.

4

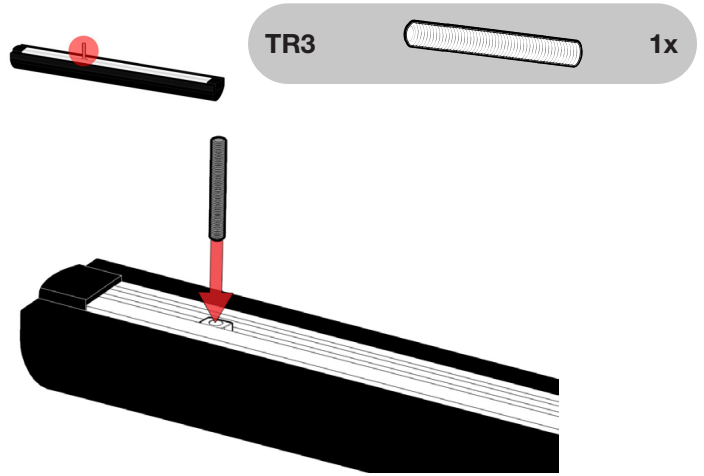

Place the square nut in the slider along the new mark.

5

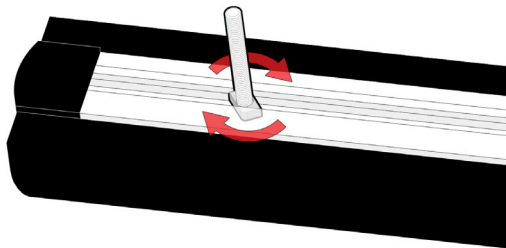

Only two square nuts are needed for fastening the vertical bumper to the dock. If your bumper has more than two nuts in the slot, you can hide the extras under the black sleeves at the end.

6

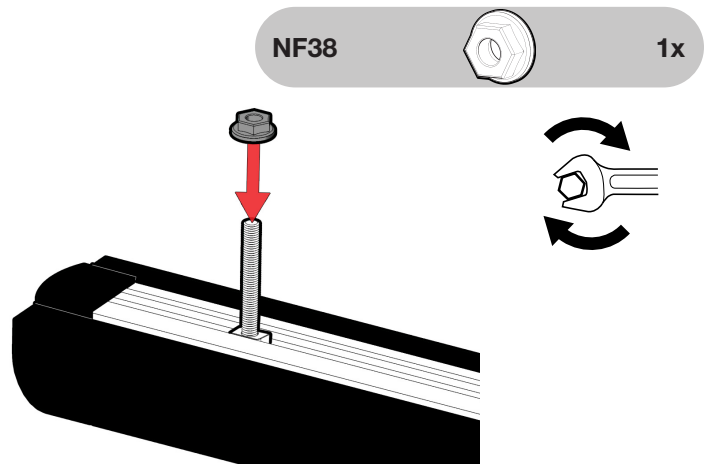

Insert the rod into the square nut.

7

Twist the square nut inside the aluminum channel of the bumper until it locks to ensure it will not fall out. Hold your finger on the nut to prevent it from becoming misaligned. Tighten the rod.

8

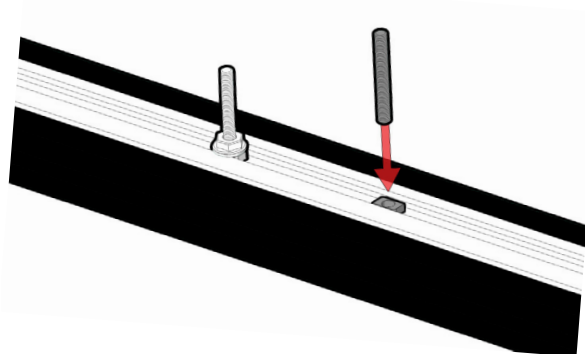

Fasten the flange nut (**NF38**) onto the rod. Hold the square nut to ensure it stays in play while tightening the assembly.

9

TR3

1x

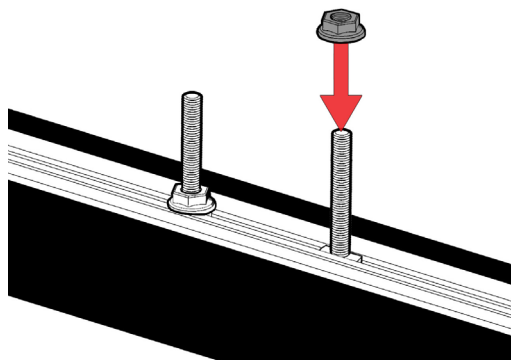

Insert the second rod like in **STEP 6**.

10

NF38

1x

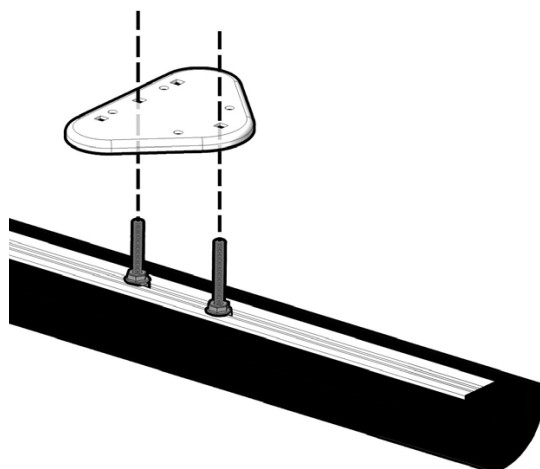

Fasten the flange nut (**NF38**) onto the rod. Keep loose so you may slide the bolt along the channel for the next step.

11

TPU1

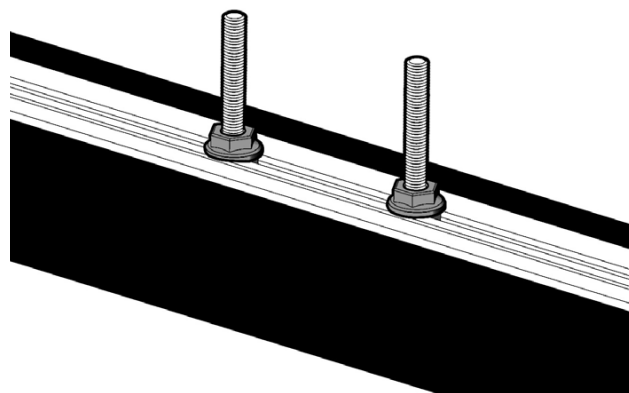

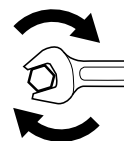

1x

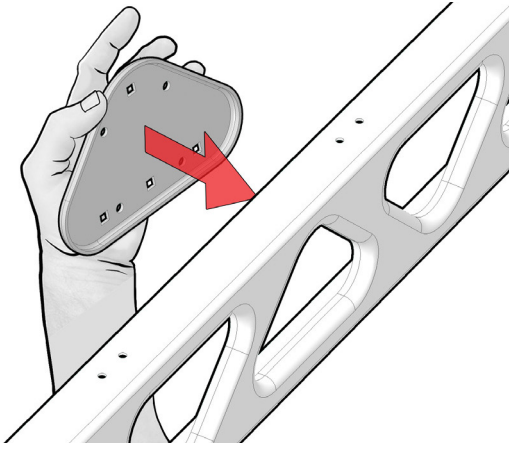

Align the rods so that they fit onto the holes of the triangle backing plate.

12

Tighten the flange nuts in place.

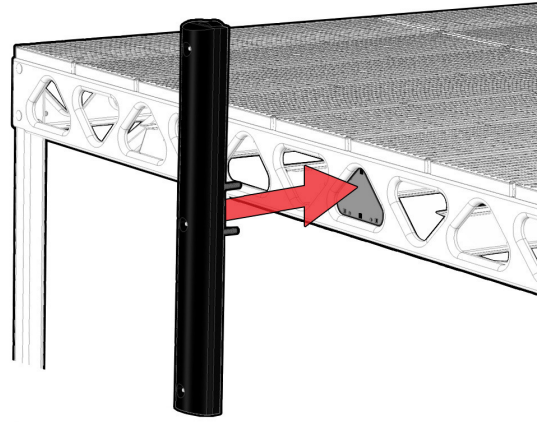

13

Find an appropriate location to mount the vertical bumper and place the triangle plate on the back of the truss.

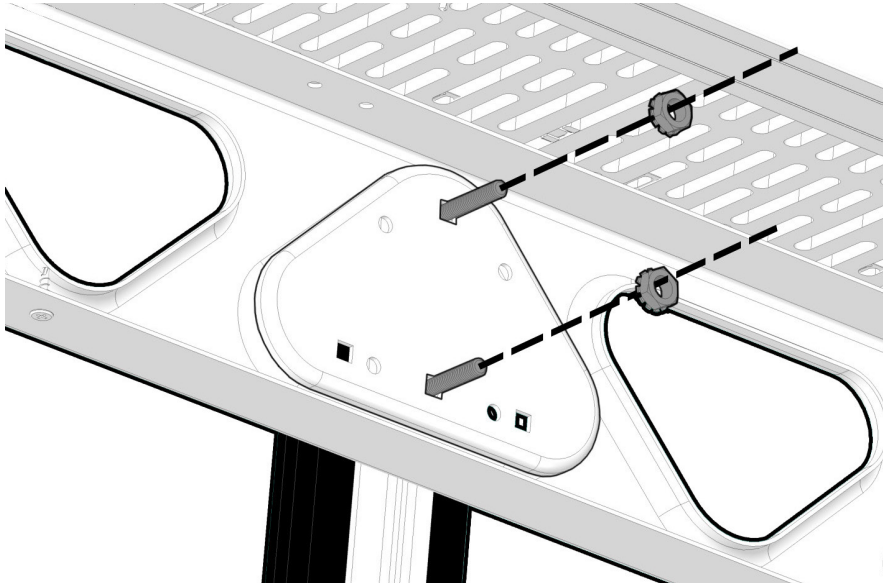

PLEASE NOTE: Some components on the dock from the image above have been hidden to better illustrate assembly.

14

Feed the bolts on the bumper through the backing plate while holding it in place.

15

Using the lock nuts (**NL38**) fasten the assembly onto the dock as seen above.

NL38

2x
